DO NOT CIRCULATE

1. In November 1951, an unidentified East German firm commissioned Tewa-Neustadt to produce a piece of copper wire band, to be used, as far as is known, as part of the current withdrawing equipment (sic; bus bars?) in high-powered motors. The firm delivered the base material from which the band was to be made. This consisted of copper wires coiled together to form a string about five mm. in diameter, called antenna cording (Antennenlitze).
2. At the end of March 1952, Tewa manufactured from this base material a handmade length of band, between thirty-five and forty mm. wide and ten meters long.
